

6 STEPS

6 Steps to Solar Power for Your Home The GreenFaith-AP Solar 2012 Residential Solar Campaign

GreenFaith & AP Solar are offering New Jersey homeowners the chance to have a solar array installed on their home. The system is installed, maintained, monitored, and insured by the program at no cost to the homeowner. And, you purchase the solar power at a discount to the utility price! Here's how it works.

NJ
HOMEOWNERS

NO COST INSTALLATION
& ELECTRICITY SAVINGS

FROM SIGNED AGREEMENT TO A SOLAR
POWERED HOME, IN MOST CASES

STEP 1

We assess
your roof's
solar capacity.

Using satellite photos and physical measurements we assess your home's roof size, orientation and shading to determine if it qualifies for the program.

STEP 2

We analyze your
electricity use.

Provide a copy of your most recent electricity bill. We need the entire bill, not just the payment page. Please scan and e-mail your entire bill to solar@greenfaith.org or fax all the pages of your bill to 732-565-7790.

NOTE: If you have a PSE&G bill, please make a photocopy of the bill on white paper before faxing - otherwise the fax is not readable.

STEP 3

The program funder
conducts a standard
utility credit check.

Solar arrays are expensive. Before the program invests \$20,000 to \$40,000 to install the system on your home, confirmation is required that:

YOU ARE A
HOMEOWNER

CURRENT ON
ELECTRIC BILL

NO LIENS OR
JUDGEMENTS

680 - 700+

CREDIT
SCORE

STEP 4

Site visit and
enrollment.

AP Solar staff visits your home to assure that it qualifies for the program. The AP Solar representative will provide an overview of the program and help you enroll, locking in funding for the solar array on your home.

STEP 5

Final design and
contract.

AP Solar's engineering team conducts a comprehensive analysis of your home and produces the final plans for the solar array. Following the completion of all plans, you'll meet with your AP Solar representative to review the system in detail, get your questions answered, and execute your contract.

STEP 6

Permitting,
construction, and
inspections.

AP Solar secures the necessary permits, oversees construction, and coordinates the inspections required for solar projects. Then - the switch is flipped (literally!) and your home starts using solar power!
